The services stay behind the visitor experience.

OAuth client/provider setup is pending. Inventory verified 22 Oct; runtime flow and new routes are proposed.

A / WHEN CODE IS RELEASED

GitHub

TheInternetOfValue/
word-wallet-web

→

Netlify build

Reviewed compatible release.
Frontend and API functions.

→

Identity deployment

Existing site:
word-wallet-web-dev

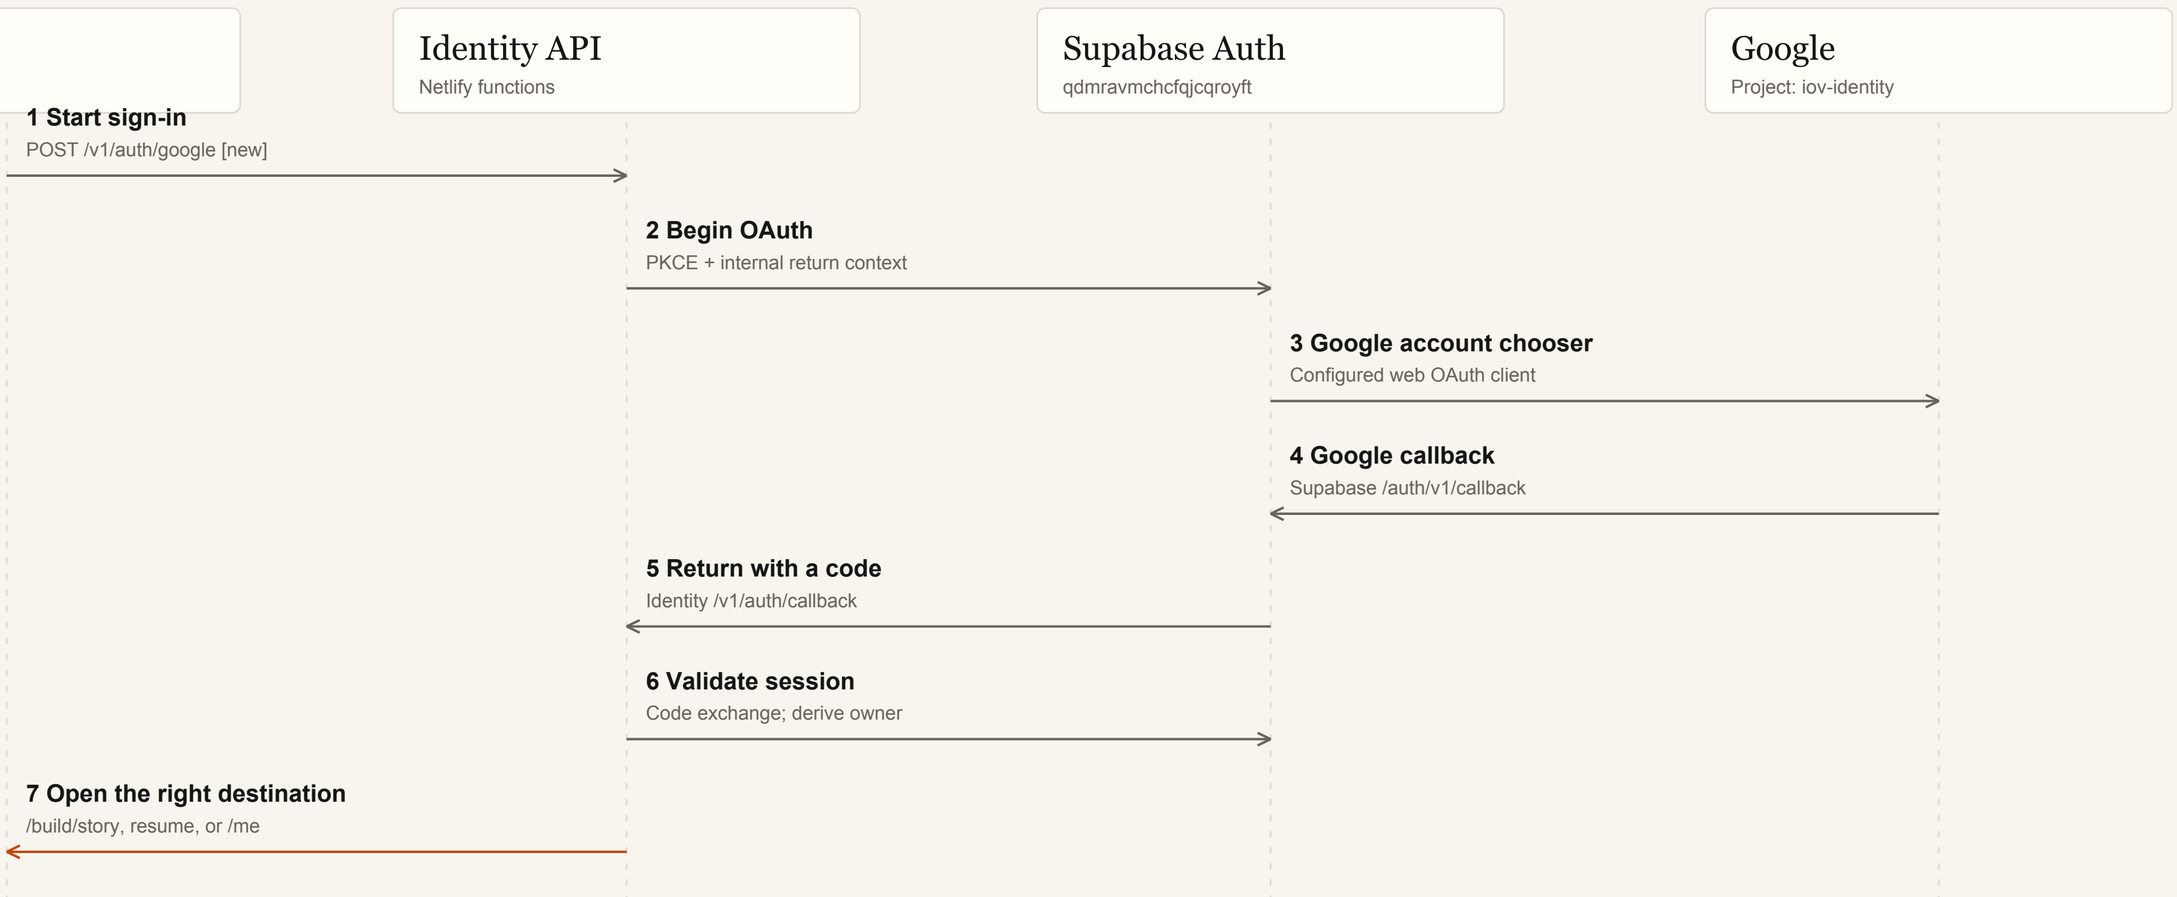

→

Identity origin

https://identity.
theinternetofvalue.org

GitHub delivers code; it does not process each login or receive personal stories.

B / WHEN THE PERSON CHOOSES CONTINUE WITH GOOGLE

Google verifies the account. Supabase establishes the session. Identity creates or reuses the IoV member association.

Google callback: https://qdmravmchcfqjcqroyft.supabase.co/auth/v1/callback

Identity callback: https://identity.theinternetofvalue.org/v1/auth/callback

Private source first. Public reading only after an explicit choice.

Keep the existing evidence/publication system. Add the missing owner-authored identity path.

C / PRIVATE AUTHORING AND THE FULL OWNER VIEW

NEW VIEWS

Person writes

/build/story or a chosen layer.
Original words, private draft.

→

EXTEND EXISTING

Identity API

Authenticate each request.
Validate owner + base revision.

→

NEW CONTRACT

Private persistence

Revisioned draft and confirmed
self-described statements.

→

EXTEND EXISTING

Owner portrait

Compatible private projection.
Full reading at /me.

Confirmation is not publication.

Self-authored values need their own provenance and valid private projection. Keep issuer records distinct; do not fabricate an imported identity.

D / OPTIONAL PUBLICATION AND PUBLIC READING

Choose details

/me/sharing
Parent choices also gate context.

→

Review snapshot

/me/sharing/review
Explicit Publish selected details.

→

Public projection

Identity API returns
only approved details.

→

Public renderer

Foundation adapter + shared
Aura and reading panel.

→

Visitor reads

/wellbeing-identity/
people/{handle}

Further edits stay private until reviewed again. Withdrawal updates the public response and relevant caches; the private portrait remains.

MODULE BOUNDARIES

Spec

Canonical meaning and paths.
No new score from filling rings.

Identity / Word Wallet

Auth, owner data, sources,
sharing and existing evidence.

Foundation + renderer

Approved public presentation.
No private drafts sent here.

Value Log

Separate daily activity,
calculations and secure handoff.

Source: pinned Word Wallet 6a91530 + Foundation 07966b2 (22 Oct); Supabase Google/PKCE/redirect docs + Netlify Git docs (23 Oct). Full links accompany the boards.
